

Concertina Wire

Concertina Wire is manufactured using a central core of high tensile wire around which a tape of razor sharp barbs is machine crimped. Concertina wire is very strong and reinforced with a steel coil which makes it very hard to bend while the barbed have a piercing and gripping action. Generally used for fencing borders for security purposes.

We are among the distinguished names in the industry for manufacturing and exporting Concertina Wire. The products are highly appreciated for its durability and comfortable installation. They are effective in providing protection to premises, owing to the razor sharp barbs and durable steel wire. The wires are resistant to corrosion as these are made from high quality stainless steel procured from reliable vendor base.

Coil Diameters (mm)	Coil Diameters (inches)	Spiral Turns per coil	Recommended Stretched Length (mtrs)	Clips per Spiral
450mm	18 inches	50/51	8m to 10m	3
610mm	24 inches	55/56	8m to 10m	5
750mm	30 inches	55/56	8m to 10m	5
900mm	36 inches	55/56	10m to 12m	5
1050mm	42 inches	55/56	10m to 12m	5 to 7
