

# Cables & Wires

## The Perfect Transmission

Jalganga quality with reliability Cables are manufactured for critical space requirement, protection against indefinite immersion in water under national standard conditions, protection against rain - water and against ingress of small solid foreign bodies.

Jalganga Cables are produced from best quality electrolytic copper, which is drawn, annealed and bunched on automatic machines to ensure flexibility and uniform resistance. The conductors are insulated with a special grade of PVC on sophisticated co-extrusion lines. Outer sheath consists of highly abrasion resistant PVC compound impervious to grease oil and water etc.

## Features

- Cables are flame retardant.
- Long life & superior insulation in submerged water.
- FR PVC insulated wires & cables.
- E.C. Graded copper conductors for superior transmission.
