

Control Panels

Jalganga Control Panels

Jalganga control panels are available for single and three phase submerged pump sets. Panels contain starting and running capacitors. Starting capacitor provides the torque required for the motor start, running capacitors ensures smooth motor operations. Different range of start and run capacitors are provided according to motor ratings. Voltmeter also provided to check the incoming voltage.

Wires used for wiring are of best quality and with different colour indications Red (R), Yellow (Y) & Blue (B). They are marked by tags for clear connections. Terminals are crimped properly to avoid sparks. Heavy duty relay contactors are used to ensure overload protection.
