

Vibro Screens

Vibro Screen is a most effective solution for various screening and separation applications encountered in plastic industry, particularly in case of reuse of the material.

Vibro Screens are also suitable for grinding of plastic / polymer granules for effective removal of dust particles and oversized particles. These machines, when used for Reprocessed material from scrap cutter, are ideal for separating un-cut pieces and fine dust, providing exact granule size for recycling (reuse), thus meeting the demands of the Plastics Industry.

Unique Features:

- Usable for Dry, Solid/Liquid Separation
- High processing rate per unit area of Screen
- Modular design for 1 to 5 Screen
- Anti Binding Ball Tray & Ring Tray Arrangement is optional.
- Completely Dust Free.
- Maintenance Free
- Noiseless processing unit with dust cover.

Technical Specifications:

Model	Screen Size	Motor H.P.
PTX-18	18"	0.25
PTX-24	24"	0.5
PTX-36	36"	1.0
PTX-48	48"	1.5
PTX-60	60"	2.0

* Capacity depends on type of materials & scrap size.

Note: All specifications are subjected to change due to continuous R & D.
