Damper valves are also butterfly type damper valves used to stop or regulate the flow of liquid or gases through pipes. Our damper valves are available in both wafer type and double flanged end connection.

We are supplying a wide range of damper valves for various industries on timely delivery. So, we are widely accepted as a damper valve manufacturer and supplier in the markets. [Audemars Piguet replica watches](#)

We are the most popular Damper valve manufacturer in India supply and export a wide range of Damper valves to worldwide countries such as UK, USA, Canada, Dubai, Bangladesh, Sri Lanka, Australia, Kenya, Nigeria, UAE, Jordan, Yemen, Uganda, Iran, Bahrain, Qatar, Turkey, Saudi Arabia, South Africa.

Key Features:

Our damper valves are designed and fabricated with features like:

- Manual, electric or pneumatic operated
- Very less leakage, due to tight sealing design
- Metal to metal seat
- Robust and sturdy construction
- Applicable for high pressure and temperature applications
- Operated with high efficiency and high performance

Applications:

We provide damper valves for various applications in industries like:

- High pressure and temperature applications
- Oil & gases
- Water treatment
- Cement, sugar factories
- Cooling water and air applications
- HVAC applications
- Many processing plants
- Food & beverages
