

# Duplex Strainers

Sasthan Duplex strainers are innovative and economical alternative to conventional duplex basket strainers. Sasthan Duplex strainers are designed for application where flow cannot be shut down.

Sasthan Duplex strainer or twin basket strainer is a type of filter built into a fuel, oil or water piping system and it is used to remove large particles of dirt and debris. The duplex strainer system usually consists of two separate strainer baskets

housing. The system also contains a valve handle placed between the two baskets to divert the flow of liquid to one strainer while the other is being cleaned. On some strainers, the valve will work automatically and the strainer will perform a self-cleaning operation. These types of strainers are installed in pipeline systems where flow cannot be stopped.

## Material of Construction

MOC	CI/SS304/SS316
Standard	Any International Standard as per client request
Size	1" to 24"
