

## Centrifugal Fan

Since from the year of establishment of our company in the pneumatic systems business, Nice puts a priority on the engineering and construction of Centrifugal Fan.

Our fans serve industries where they must run around the clock, continually delivering high performance under tough conditions.

Nice Fans operate in plants where downtime is unacceptable and plant efficiency is critical. It was with this in mind that Nice developed and has refined its line of industrial fans which offer exceptional value and longevity to its customers around the world. Nice Fans are designed specifically for applications such as pneumatic conveying, dust control and air stabilization.

While Nice Fans continue to evolve to meet customer needs, certain advantages remain constant. Heavy-duty, sanitary, food grade construction, custom fan design, total systems design, after sale service and parts inventory are priorities with everything Nice builds.

### **Application**

Many companies build fans. Many engineers apply them. Few companies have the experience and ability to combine these functions and truly serve their customers' needs. Nice believes that designing air systems is as much an art as it is a science. Text books and professors can provide a strong foundation. Experience in the field has taught Nice how to handle each special set of circumstances properly, accurately and efficiently.
