

Aerospace

The World's Full-Service Aerospace mechanical testing & Structural Aerospace Testing Solutions Provider

Building on more than four decades of experience working closely with the world's leading aerospace manufacturers, Inova provides the technology and expertise required to help engineers and researchers accelerate the acquisition of high-quality test data, readily adapt to new test requirements and enhance overall lab productivity. Our solutions address the full scope of aerospace testing requirements, from full-scale structural and subassembly evaluation to materials characterization. Whether your primary focus is certification testing for a new airframe design, completing flight-by-flight spectrums or carefully evaluating the strength and durability of individual components, Inova can help. We bring a deep understanding of how to configure the best solution for your test, integrate the complete system and conduct tests that deliver precise results with speed and confidence.
