

Jaw Crusher

“Shri Krishna Jaw Crusher” is the product of long experience and skilled workmanship. The crusher is available mild steel body.

The crushing is achieved between the fixed jaw held in the body and the swing jaw held in the jaw stock. The main driving shaft, which is eccentric gives elliptical to and fro motion to the jaw stock. The discharge opening is adjustable hence the size of the end product can be controlled by the control lever.

The two heavy cast iron flywheels are provided to ensure steady running. Drive arranged either direct through the flywheels or through a suitable pulley.

Shri Krishna Jaw Crusher Features:

- Jaw Stock made of heavy duty cast iron/mild steel with provision to hold the swing – jaw.
- Swing Jaw are made of manganese alloy iron or steel and are replaceable can be used both ends.
- Check Plates have two fold purposes. First it holds the fixed jaw with the body and secondly it protects the sides of the body from the wear.
- Tie Rod made of steel. Meant for hold the jaw stock.
- Toggle Plate is made of cost iron. It impart the rolling motion to the jaw stock.
- Fly Wheels: made of heavy duty cast iron for ensuring the smooth running and providing reserved power to jaw.
