

Loaders

A Loader is a heavy equipment machine used in construction and sidewalk maintenance to move aside or load materials such as asphalt, demolition debris, dirt, snow, feed, gravel, logs, raw minerals, recycled material, rock, sand, woodchips, etc. into or onto another type of machinery

The machines hybrid technology delivers performance that is equal to or better than the conventional 644K, depending on the application. The engines constant operating speed maintains continuous hydraulic flow at all times, which delivers crisp hydraulic responsiveness and reduces cycle times. The electric motor smoothly delivers torque resulting in fluid operation and a smoother ride. As a result, the 644K Hybrid delivers optimal performance for novice and experienced operators alike.

Features:

- Robust construction
- Minimum maintenance
- High performance
- Easy installation
