

Lump Breakers / Crushers

Lump breaker / Crusher is an efficient, economic machine specially designed for breaking up friable lumps in bulk materials discharged from silos, bins or hoppers. These Lumpers can be used as Pre crusher for Pulverizer. The rotation of specially shaped blades through a fixed comb gives an efficient lump breaking action. These lump breakers are provided with a wide flanged inlet area, which is used for collecting large masses. These lump crushers can process chemicals, minerals, salt, sugar, food products, and many more.

Technical Specification:

- Sturdy construction
- Easy to operate, clean and Maintenance
- Wide Flanged Inlet area
