

Butter Fly Valves

Confirming To IS : 13095

This valve is for use on water pipeline for regulating and shutdown purpose. As the water load on door is balanced, very rapid operation can be effected. The valves are absolutely dropped tight because the neoprene rubber sealing is fitted, which can change easily in future at site.

The valve is constructed of graded cast iron. The door is double convex shape to prevent eddies and reduces head loss. The operating power being transmitted through lever gearing in which an indicator pin is provided to show the position of door.
