

## Ridge Ventilator

Light weight, quick installation, being installed in ridge, ideas waterproofing, inner (manual and electric) damper, and safe operation, it is applicable to different factories.

### **Installation of Roof Ventilators**

Roof ventilation may be arranged in single row. double row or multi-row. They can be arranged on the ridge of the house with double-slope roof, or in the inclined roof.

There are many methods of connection between a ventilator and roof. Determine the proper connection methods according to actual condition of the project.
