

Goods Lift

Goods lifts are ideal equipment for movement of material from one floor to the other. The self supported load bearing lift structure is fabricated from structural steel sections and plates. This structure will be grouted at the base level and supported at landing levels and top.

Salient Features of Pegasus Goods Lifts

- All safety codes as per IS 6305 (Part II/1980/10.1) are incorporated and followed for lifting devices and lifting the car as per IS 6305 (part II/1980/11.4) and IS 6305 (Part II/1980/11/5).
- Mechanical stopper to stop overshooting of maximum lifted level.
- Cut off limit switches/signals for location & positioning.
