

Wet Collector

We Aarco Engineering Projects Pvt. Ltd. are leading manufacturer/supplier/contractor of Wet Collector Service Providers in india.

Wet type Dust Collector is designed for collecting dust from foundries, mines, Engineering workshops etc. The collectors are available from 5,000 M/hr. To 80,000 M/hr. Wet type dust collectors has high collecting efficiency, operates without water pump. The main component of wet collector are upper section/lower section and ventuary unit. Upper section consist of inlet chamber, dewatering baffles, outlet opening and access doors. Lower section is provided with hopper and ventuary. The dust laden fumes enters into inlet chamber then flow downward through ventuary, the water trap the dust particle into agglomerates and the dust is removed in the form of slurry from hopper.
