

Rotary Valve

Fab-tech engineers design and manufacture the rotary valve in fabricated construction.

Rotary valve mainly used for powder type & granule type material handling application for uniform feeding in equipment as well as material discharge from equipment.

Rotary valve saves the material losses and control the dusting during material handling, which is advantage of this product.

Rotary valve is made out from M.S. or S.S. material to suite the application. It is operated by chain driven or direct gearbox arrangement.

- **Size:** 6" to 20"
- **Application of Rotary Valve:**
- Pharmaceutical Ind., Minerals Ind., Plastics Ind., Food Ind., Chemical Ind., Agro Ind., etc.....
