

# Bucket Elevator

- The bucket elevator is design in vertical column type shape, so this machine covered low floor space. it is most preferable choice for lower floor space and discharge at height application in industries.
- Main body is Complete covered boxes, which are made from MS / SS construction, the top & bottom box are fitted with pulley.
- The machine runs with nylon or canvas belt for low density material and for heavy material the chain will be use instead of belt.
- We offered different size and type of buckets like MS / SS / Plastics, as suitable with client application.
- The buckets are fitted on belt or chain and run by gearbox.
- For smooth running and longer life of machine we are using standard quality Gearbox, Electric motor, Belt, Chain, Bearing, etc....
