

## Worm Gear

We are offering a precision-engineered array of Worm Gears. Worm Gear and Worm Shaft pairings provide large speed reduction ratios with only one gear pairing in a more compact space when compared with other types of gears. These gears are widely used in various industrial applications for reducing the rotational speed of the machines. We offer up to a maximum ratio of 100:1 with our products. Following industry-defined guidelines, we manufacture the entire range by utilizing contemporary machines, modernize technology, and prime-grade raw material. Another advantage of the Worm and Wheel gear pairings is the low-level noise they produce.
