

Magnet Pumps

To Solve Your Chemical Handling & Leakage Problems

Various models Seal-less Pumps for better range selection are special because they do not use any standard seal arrangement offering wide application. Benefits include features like 100% leakproof, chemical resistance, low power input, simple construction, low price etc. The total head range from 0 to 12 mts. & flow from 0 to 130 LPM.

They are used in various application as photo cine/ x ray/ filtration plants, colour or B/W processor, electroplating/ metal finishing machines, water treatment/ etching machines etc.

It can operates on 220/240 Volts A/c, 50 Hz Single Phase Power Supply as well as on 420/440 Volts, A/c, 50 Hz, Three Phase power supply also.

They can pump liquid having max. specific gravity of 1.4 max. viscosity of 500 centipoise, liquid temp. between 00 to 800 C, the pumps wetted components are polypropylene, viton, teflon and ceramic. For chemical compatibility and any further clarification contact factory.
