

Pressure Sensors

Pressure Sensor is designed for proportional and non-proportional hydraulic cranes. Pressure Sensor features two pressure transducers that read the rod and piston end pressures of the hydraulic lift cylinders

Features:

- Extended Temperature Range
- 100 V/m EMI Protection
- Reverse Polarity Protection
- Compact Outline
- The typical load accuracy is 1% error of maximum capacity
- -40°C to +125°C Operating Temperature Range
- Burst Pressure 5X
- Proof Pressure 2X
- 1/4 " BSP thread allowing a leak-proof, all metal sealed system.
- Used only for telescopic boom crane
