

# Valve

Vijay Brass Industries Manufacturer and Exporter of offer a wide range of valve  
jamnagar, gujarat, India

At their most basic, valves are devices that work to control, regulate or direct flow within a system or process. They often feature a range of characteristics that help to define their ideal application.

However, whether you're looking to control flow, provide safety in a system that is piping liquids, solids, gasses or anything in between, there are likely stainless steel valves available to help.

A valve is a device or natural object that regulates, directs or controls the flow of a fluid (gases, liquids, fluidized solids, or slurries) by opening, closing, or partially obstructing various passageways. Valves are technically fittings, but are usually discussed as a separate category.
