

Rubber Washers

A variety of standard and bespoke Rubber Washers on a quick lead time, ideal for making up kits of parts for spares.

What are Rubber Washers used for?

The function of a rubber washer is to act as a simple gasket around a stud, shaft or bolt. Varying degrees of tolerance can be achieved, however it is important to consider the amount of clamping force and compression required to achieve an effective seal, without over-stressing the material.

Martin's Rubber Company can supply **custom washers** or larger quantities of off-the-shelf **rubber washers in bulk**, which we manufacture in-house across many different sizes and thicknesses. We carry sheet materials in stock ready to cut or punch washers using hydraulic cutting presses or by hand fabrication. With our wide range of standard cutters for washers, we can provide most standard parts on a quick lead time. We can also supply to order or to a schedule, and can make up kits of parts for spares. Our comprehensive range of rubber washer materials covers everything from neoprene washers & silicone washers, to rubber fender washers and everything in between.

Where to Buy Rubber Washers

Consideration also needs to be given to the environment in which the rubber washer will be operating and therefore the most suitable material to be used.

Our **rubber washers** come in a variety of different sizes and thicknesses. Please contact us stating your requirements and we will be happy to assist. If you are unsure as to what you need, just ask and we will use our expertise to give you guidance.

Our range of stock materials is vast, with stock sheet material ranging from special thin gauge materials at 0.3mm through to 25mm thickness. We offer standard commercial grades of rubber, through to military specifications and other high performance materials manufactured to specifications including BS1154, BS2751 and BS2752.

Rubber Washer Materials

Our rubber washers are available in a variety of high grade rubber sheeting materials, from traditional solid natural rubber grades through to high specification synthetic rubbers, such as viton and silicone. We also manufacture and supply the following different types of rubber washer materials. Although, please note that this list is by no means exhaustive.

- Commercial rubber washers
- Cork washers
- Insertion rubber washers
- Neoprene washers
- Nitrile washers
- Natural food grade rubber washers
- Viton washer
- Silicone rubber washers
- EPDM rubber washers

Rubber Washer Sizes

Not only can we provide a large range of materials to choose from to help you select something suitable for the environment in which you will be applying the rubber washers, but we can also provide rubber washers in different shapes and sizes too. From circular through to rectangular, the application of the product will determine what size and shape is needed.

For more standard (required) sizes, we have a constantly updated stock of rubber washer products. If you require a standard size and rubber grade of washer, we can source the items straight from our warehouse and send them out immediately, getting the product to you very quickly so that you can make your replacement as fast and efficiently as possible.

Rubber Washers in Bulk or to Order

As well as our standard rubber washers, which are available to buy in bulk online, we can also manufacture bespoke products to order. We would recommend speaking to one of our knowledgeable and experienced team to discuss your requirements. We can talk you through your full range of options, covering size, materials, order quantity and answer any other questions you might have.

If you require samples of our rubber washer products, we can arrange to deliver of these, as well as offer minimum order quantities on standard sizes and discounts for bulk orders of products.

View our Cutting and Punching Expertise for more information on our proficiency and feel free to contact us so that we can discuss your specific requirements and provide the best solution for your application.
