

## About Our Company

Since its inception in 1966, Jilbents Mechanical Works Pvt Ltd is manufacturing and exporting a wide range of industrial products that are used in the industries of defense, dairy and engineering. Our range of products is appreciated for its trouble free operation and good performance. We export the products in the markets of UK and US. Our range includes chemical heaters, electric welding equipment, air heaters, welding machines, defense equipment, bunker blaster gun housing, heat exchanger, pressure vessel, industrial cooling system, milk silo, etc With our vast experience, we specialize in taking up the turnkey projects for the assembling, erection and maintenance of products. All the projects are assured to be completed within the stipulated time frame. Founded by Mr. S.R. Bilimoria, the company has acquired the certification of ISO 9001:2000. All our fabrication and machining job works conform to this quality standard. We have employed qualified quality inspectors to check quality at every stage of product production and machining.

### Customer Satisfaction

The company is dedicated towards acquiring the highest level of customer satisfaction. In our quest to fulfill this commitment, we maintain finest quality and efficiency in all our products and services. This enables us to fulfill the needs of domestic as well as and international clients, based in US and UK.

Customized solutions offered by us have significantly contributed towards achieving maximum client satisfaction. Various other factors which assist in satisfying our customers are as follows:

- After sales technical support
- Installation Training
- Operational Training
- Time delivery/completion of products/solutions
- Established customer care support

## **Research & Development**

A research and development department is an integral part of our company. It suggests various methods, technologies and/or processes which can improve our range of products and services. It is managed by a team of Research & Development experts who have a good understanding of methods of conducting researches. They follow conventional modes coupled with modern methods to carry out the research. In this process they are assisted with all the required equipments and tools installed in the departments.

It also has latest computers that are used to store the data collected through researches. All the data is extensively analyzed to find out the most efficient, feasible and beneficial method, technology and/or process. Reliable recommendations of the research and development department enable us to offer an innovative product range to our clients.

## **Quality Compliance**

Our company believes that quality is the primary entity which establishes our reputation in the domestic and global markets. So, we employ various quality measures in the production of our products. All the measures are in compliance with our certification of ISO 9001:2000.

The stock of materials received by us is inspected to ensure its conformity with our standards. Only after this confirmation, the materials are used in the manufacturing process, which is carried out under the direction of our quality inspectors. They also conduct various tests on the finalized products. Various parameters on which our products are tested include:

- Tolerance
- Performance Under High Temperature & Pressure
- Tensile Strength

To conduct all the quality tests, we have our own quality measuring facility. We also provide third party inspection of our products.

## **Team Of Professionals**

Under the ownership of Mr. Vispy .S . Bilimoria, the company has employed various qualified personnel, who possess rich experience in their definite work domain. They are systematically categorized into different teams, which allow step by step execution of the undertaken projects. Various teams of professionals include engineering, quality, production, packaging, marketing, administrative and customer care.

Our personnel are committed to surpass all our clients' expectations. To accomplish their responsibilities, they follow a business specialized and customer oriented approach. They are highly cooperative and strive hard to solve every customer query, within the shortest lead time.

## **Future Plans**

The company plans to set up a plant in Sanaswadi on 3 acres plot area to enhance our production capacity. In addition, we are also on the look out for tie-ups with MNC's for heat exchangers.

## **Industries Catered And Customized Solutions**

The products offered by us cater to the needs of various industries which includes dairy, defense and engineering. As every industry has different requirements regarding a specific product, we offer customization services to our clients. In this service, we develop our products according to the specific requirements of our clients. They can also provide us with the product blueprints or prototypes and we assure to develop the products' accordingly.

We can customize the products on various parameters such as capacity, polishing and others. In addition, we also have the facilities to package the products as per the client's special request. Our well equipped infrastructure largely assists us efficiently providing the customized solutions.
