

Duct Heater

We offer Duct Heater which are designed in rugged and efficient manner. These heaters have the capability to heat large amount of air. It contains the special feature to warm up as well as cool down the air within a period of time. This kind of industrial heater is designed in a very versatile manner which has the features to use in any commercial and industrial applications. You can find a range of option in size, specification which are designed in single as well as three phase volts. This enables our clients to choose the one which perfectly blends with their needs and requirement.

- **Description**

Features

- Unique construction design
- Excellent performance under challenging circumstances
- Made from premium quality raw materials
- Use of advanced technology
- Long service life
- Available in different configurations with wide temperature resistant range

Ordering Information Required

- Duct size
- Air flow velocity
- Breaking Resistor
- Inlet and outlet temperature
- Wattage, voltage and phase
- Number of circuits
- Element watt density
- Element sheath material
- Mounting flange material
- Insulation thickness
- Electrical enclosure type
- Over-temperature thermocouple, if required
- Any other modifications

Applications

- Air Drying/Curing Operations
- Booster Air Heater
- Breaking Resistor
- Core Drying
- Dehumidification
- Forced Air Comfort Heating
- Heat Treating
- Make-Up Air Heating
- Re-Heating
- Resistor Load Banks
